

Modern Web Development with Laravel

Course Focus: Building Scalable, Enterprise-Ready Applications

Level: Intermediate (Requires basic PHP/HTML knowledge)

Course Description

Welcome to the Laravel mastery course! Instead of just learning "how to code," we're going to focus on building "production-ready" apps. Laravel is the most popular PHP framework for a reason—it makes the hard things (like auth, caching, and database management) feel easy. By the end of this course, you'll have built a full-scale SaaS-style application from scratch.

What You'll Learn

- Mastering the **MVC (Model-View-Controller)** pattern.
- Database wizardry using **Eloquent ORM**.
- Creating dynamic UIs with **Blade** and **Livewire**.
- Building and securing **RESTful APIs**.

Weekly Breakdown

- **Week 1: The Foundations** – Setup (Laravel Herd/Sail), the Request Lifecycle, and Routing.
- **Week 2: The View Layer** – Blade templating, components, and integrating Tailwind CSS.
- **Week 3: Database & Eloquent** – Migrations, Factories, Seeding, and Relationship mapping (One-to-Many, Many-to-Many).
- **Week 4: Business Logic** – Controllers, Form Requests, and Validation (The "Trust No One" mindset).
- **Week 5: Authentication & Security** – Using Laravel Breeze, Middleware, and Role-Based Access Control (RBAC).
- **Week 6: Advanced Eloquent** – Scopes, Accessors, Mutators, and the N+1 problem.
- **Week 7: The Modern Stack** – Introduction to **Livewire 3** or **Inertia.js** for reactive interfaces.
- **Week 8: APIs & Deployment** – Resource collections, API Auth (Sanctum), and deploying to a VPS or Laravel Forge.

Final Project

Build a **Task Management Platform** with team collaboration features, real-time notifications, and an admin dashboard.
